SUMMARY

PMP-certified IT Project Manager who has delivered software across iGaming, Web3, fintech and SaaS at five companies. I lead cross-functional teams of up to 20+ engineers, QA specialists and analysts, and have owned a \$1.5M+ cloud infrastructure programme, a games aggregator named aggregator of the year 2026, and a Telegram mini-app that grew past 11M active users. I came in through software development, so I can hold a scalability argument with engineering leads and brief a CFO on the same decision. Agile, Scrum and hybrid delivery in regulated, high-traffic environments.

EXPERIENCE

Senior IT Project Manager, Spribe

October 2025 – Present · Poland (Remote) · iGaming

- Lead 20+ engineers, QA specialists and analysts building [BroadHub](#), Spribe's iGaming aggregation platform, owning it from roadmap to production rollout.
- Run sprint planning, dependency management and release management, working with the Product Owner daily.
- Deliver thousands of games through a single API integration, plus the engagement layer on top: in-game bonuses, jackpots, tournaments and real-time campaigns, with multi-currency and crypto support.
- Drive scalability and technical-debt decisions with engineering leads rather than deferring them; the aggregator was named aggregator of the year in 2026.

Technical Project Manager, Betsson Group

May 2025 – October 2025 · Malta · iGaming

- Worked on migrating a group brand off a legacy on-premise stack onto AWS: databases, backend and frontend, against an estimated \$1.5M+ yearly infrastructure budget.
- Sequenced cutovers around live World Cup betting so no service degraded during peak traffic.
- Worked on implementing a Datadog-style observability platform: log aggregation, error tracking, service metrics, dashboards and live-ops alerting.
- Coordinated 100+ technical stakeholders across 12 departments through vendor selection and rollout, with planning, risk and reporting spanning several programmes at once.

Senior IT Project Manager / Product Manager, Nordom

November 2024 – May 2025 · Tbilisi, Georgia · Web3

- Led a cross-functional team of 15+ engineers building a [centralized cryptocurrency exchange](#) from nothing to a working MVP: matching engine, wallets and onboarding, targeting the US market.
- Delivered a Telegram mini-app alongside the exchange that grew past 11M active users.
- Ran internal Web3 workshops for 50+ colleagues, balancing regulated-money constraints against crypto delivery pace.

Head of Project Management, MaxinAI

February 2024 – November 2024 · Tbilisi, Georgia · Web3

- Oversaw resource allocation across 10+ projects and business development on EU and US opportunities, while continuing to lead Web3 delivery.

IT Project Manager / Product Manager, MaxinAI

- Delivered 10+ products for international clients and blockchain foundations across DEXes, liquid staking, DAOs and real-world assets.
- Built a DeFi solution on Ethereum for a client to tokenize a US real-estate portfolio with \$2 billion of underlying assets.
- Secured \$150K+ in total grant funding from the Ethereum, Worldcoin and Stellar foundations, including \$25K+ for [Farcaster Humanizer](#) (Worldcoin Wave 1) and \$35K+ for [Skeeper](#) (Stellar Community Fund), shipping both MVPs with the team.

IT Project Manager / Product Manager, Redberry

April 2021 – October 2022 · Tbilisi, Georgia · Software development

- Delivered 10+ digital products for international clients at a Clutch top-rated agency running Agile teams.
- Led a Google Analytics competitor for a German client across 15+ engineers and 10+ marketers: event tracking, ingestion pipeline, attribution modelling and reporting layer.
- Ran delivery on [Tryhards](#), a play-to-earn shooter with a live on-chain economy that held \$3M+ TVL, sequencing game, NFT and token workstreams against a public launch date.
- Took [iPayBetter](#), a card-payments product, from zero to MVP in under four months against card-scheme and compliance constraints; cash-flow positive from day one at \$100K daily volume.
- Covered scrum master, product owner, business analyst, QA and pre-sales roles as the agency required.

SKILLS

Project management

Agile, Scrum, Kanban, hybrid delivery, sprint planning, backlog management, release management, roadmapping
Risk and change management, budgeting and resource planning, stakeholder management, status reporting, KPIs and OKRs

Technical

AWS, cloud and infrastructure migration, CI/CD, API and system integration, microservices
Monitoring, observability and incident management, QA and technical debt management
Blockchain, Web3 and smart-contract delivery, payments, card schemes and KYC/AML compliance, data analytics and SQL

Leadership

Cross-functional teams up to 20+, remote and distributed teams, C-level reporting, executive communication, conflict resolution, mentoring, hiring

Product and delivery

MVP scoping, prioritisation frameworks, product-led growth, go-to-market coordination, grant applications

Tools

Jira, Confluence, Asana, Notion, Miro, GitHub, Jenkins, Datadog, Google Analytics

EDUCATION

BA, Business Administration (IT Management), [Free University of Tbilisi](#)

2018 – 2022 · Tbilisi, Georgia

Studied on both a university scholarship and a state scholarship at one of Georgia's most selective private universities, which admits strictly on national exam ranking.

CERTIFICATIONS

- [Project Management Professional \(PMI-PMP\)](#), Project Management Institute, 2024
- [Product-Led Certification](#), Pendo.io, 2023
- [ETHGlobal Hacker](#), ETHGlobal, 2023
